

Zebrafish pou5f1 Antibody (Center)

Catalog_no: AB3392

Reactivity: Zf

Category: 抗原抗体

Size: $100\mu L/50\mu L$

Immunogen: HUMAN

Specificity: This Zebrafish pou5f1 antibody is generated from a rabbit immunized with a KLH

conjugated synthetic peptide between 141-177 amino acids from the Central region of

Zebrafish pou5f1.

Dilution: WB,1:2000;

Other_name: POU domain, class 5, transcription factor 1, POU domain protein 2, pou5f1, gp-9, pou-2,

pou2

Isotype: Rabbit Ig

Background: Involved in early development of embryos, especially in the process of gastrulation.

May play an important role in establishing and specifying rhombomeric segments. Seems to be required to maintain the cells in a highly undifferentiated state. In contrast to POU2, T-POU2 lacks DNA-binding activity because of its incomplete pou domain structure. Overexpression of POU2 does not have any effect on development, whereas

overexpression of t- POU2 causes developmental retardation or arrest before

gastrulation.
