Background: The protein encoded by this gene is a member of the ankyrin repeat and SOCS box-

containing (ASB) family of proteins. They contain ankyrin repeat sequence and SOCS box domain. The SOCS box serves to couple suppressor of cytokine signalling (SOCS) proteins and their binding partners with the elongin B and C complex, possibly targeting them for degradation. Alternatively spliced transcript variants have been described for

this gene. [provided by RefSeq, Jan 2011],
